Fire Resistant Glass - Pilkington plc

In modern buildings, glass glazing has been widely used and integrated in the compartmentation design of the buildings, such as external façades and internal partitions. It is increasingly important for a designer to understand the basic fire performance of glass glazing.

Pilkington plc is at the forefront in product testing and product development for fire resistant glass. The company has a range of products which have been tested for both fire resistance and safety performance. Based on the UK, the company is one of the world's largest manufacturers of glass and glazing products, with manufacturing operations in 24 countries on five continents and sales in over 130 countries.
